schema.sql ×

schema.sql

```
1  -- =====
2  -- EX 603 Assignment 2 - schema.sql
3  -- Theme: 2 - Movie / TV
4  -- Author: Auyon Haque
5  -- Target: PostgreSQL 14+
6  -- =====
7  --
8  -- Creation order (Step 1)
9  -- Each table is listed with the tables it references (outgoing FKs).
10 --
11 -- 1. users      -> (none)      actor
12 -- 2. genres    -> genres (self) catalog
13 -- 3. titles    -> (none)      producer
14 -- 4. title_genres -> titles, genres junction
15 -- 5. ratings   -> users, titles event
16 --
17 -- genres' only arrow points at itself, which PostgreSQL resolves
18 -- inside a single CREATE TABLE, so it still goes early.
19 -- Tables with no outgoing arrows go first: title_genres and ratings
20 -- come last because both depend on tables created above them.
21 -- =====
22 --
23 -- Reset. Reverse creation order, so no dependency blocks a drop.
24 --
25 DROP TABLE IF EXISTS ratings CASCADE;
26 DROP TABLE IF EXISTS title_genres CASCADE;
27 DROP TABLE IF EXISTS titles CASCADE;
```
