
EX603
Update
q3_1.sql
movies.sql
q3_2.sql
q3_3.sql
A3 > q3_2.sql
-- ==
-- Task 3.2: Find the bug
-- Theme 2: Movie / TV
-- Database: ex603_data (loaded from the provided movies.sql)
-- Run with: psql -d ex603_data -e -f q3_2.sql
--
-- Note: query B1 fails ON PURPOSE (that is the bug being
-- reproduced). psql reports the error and carries on with the
-- rest of the file, so the file still runs without editing.
--
-- RESULTS
-- A1 200 ratings; 34 have a withdrawn_reason, 166 are NULL.
-- A2 Broken query returns 22.
-- A3 22 (not spam) + 12 (spam) = 34, but the table holds 200.
--   The 166 NULL rows were dropped silently.
-- A4 Repaired query returns 188 (= 200 - 12 spam).
-- B1 ERROR: column "score_band" does not exist
-- B2 and B3 both return the same 54 'Loved it' ratings.
-- ==
-- ==
-- PART A: The rows that vanished
-- ==
-- --
-- A1 The nullable column: ratings.withdrawn_reason
--   The dataset already contains NULLs here, so none were
--   inserted. A reason is only recorded when a rating is
Problems
Output
